PORTFOLIO PROJECT · v1.2.3

903 Player

A one-thumb commuter player for a Hong Kong radio archive.

THE PROBLEM

The station's web archive needs a hunt for each day's link and two hands to operate, which is painful on a crowded commute. It has no API and blocks cloud IPs.

THE SOLUTION

A personal-use PWA that discovers recordings on-device, then plays them in a one-handed vinyl-style player with auto-resume.

Personal-use PWA · built in 3 active days

Key features

On-device discovery

Probes 14 days of audio URLs with metadata-only audio. No backend.

Vinyl player

Spinning disc, drag-to-seek arc ring, ±30 / ±60s controls.

Smart date strip

Lists only days with recordings; ticks episodes heard 95%+.

Auto-resume

Remembers progress per episode and picks up where you left off.

Lock-screen control

Media Session support for lock screen and headphones.

Today's shows

HK-time schedule with a swipeable card stack and 'New' badges.

Adaptive layouts

Phone, landscape two-column, 1.3x desktop and 1.5x iPad scaling.

Installable PWA

Device splash screens, auto-update and iOS safe-area fixes.
